## 1. About

### 1.1 What is HAM'S ACTOR?

HAM'S ACTOR is a software bundle for ham radios. It includes many functions, that are often used. Here is a list of functions that are or will be included in the bundle:

- QSO logbook
- Contesting function
- Many maps like satellite tracing, locator maps, etc.
- Call book and call informations
- Following functions are at now just an idea:
  - SSTV decoding / encoding
  - Packet Radio
  - DX Cluster

The best possibility to see what HAM'S ACTOR is, is to try it. You can download the software here: <http://hamsactor.sourceforge.net/download.php>

### 1.2 License

*HAM'S ACTOR*'s license is the GPL (GNU GENERAL PUBLIC LICENSE), a open source license. That means all parts of the software are source code public and free.

You can find the original license text at:

<http://www.gnu.org/licenses/gpl.txt>

### 1.3 Thanks to...

- ➔ The HSQLDB Project (<http://hsqldb.org>)
- ➔ L2FProd Common Components (<http://common.l2fprod.com>)
- ➔ The qrpforum community (<http://www.qrpforum.de>)

## 2. The user interface

This part of the document isn't finally, cause of the current programming process. Maybe the user interfece changes and so, we would have to edit the documetation often.

## 3. How it works

Comes soon...
